

Project Overview:

The objective of this project is to develop a personal website utilizing fundamental HTML and CSS skills. This website will serve as a platform to showcase a variety of personal portfolios, effectively presenting them to a public audience.

User Story1 - Portfolio Viewer: Candice

As a: potential employer or client

I want to: easily browse through the portfolio section of the website

So that: I can view the individual's past projects, understand their skills and expertise, and assess if they align with my needs.

User Story2 - Prospective Collaborator: Ken

As a: prospective collaborator or colleague

I want to: find and use the contact information on the website

So that: I can easily reach out to discuss potential collaborations, job opportunities, or professional networking.

Design Mockup:

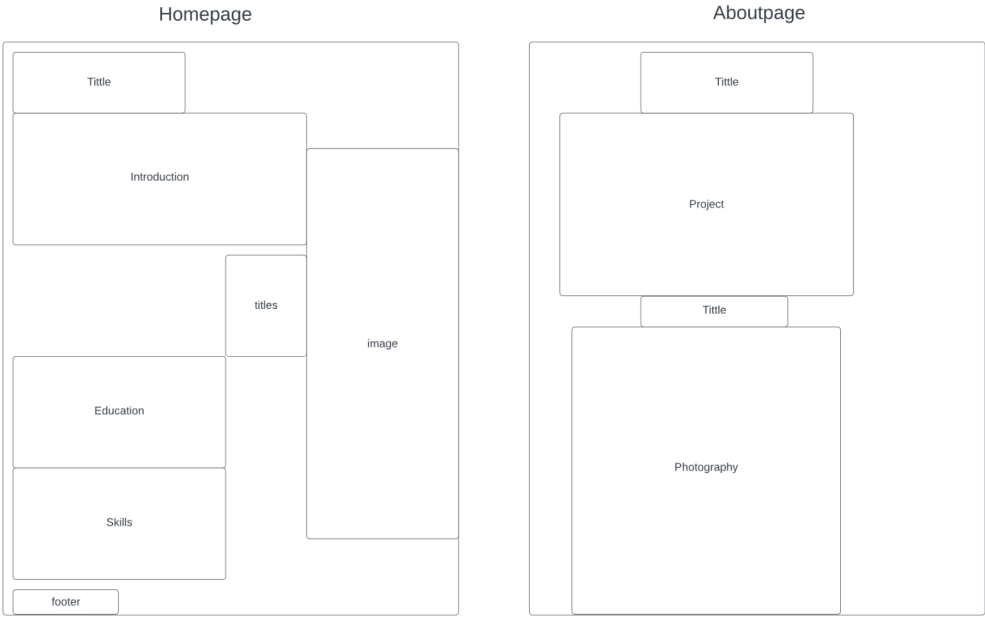

Introduction: There is briefly short introduction about this person

Button click to second homepage: This button design to click and go to the more detail about the person's page.

Home Page: Contain education, skills, and title.

About-Me page: There are two sections in this page, as project showcase and photography section.

WireFrame:

There are two pages about my personal website. Should be include introduction, education, and skills in the homepage. The second page should be include the project that I did before. Also the hobby and some images.
